

5.6 Explain – Linear Inequalities in Two Variables - Notes

**Essential Question:** How can you write and graph a linear inequality in two variables?

Main Ideas/ Questions	Notes/Examples			
<b>What You Will Learn</b>	<ul style="list-style-type: none"> <li>• Check solutions of linear inequalities.</li> <li>• Graph linear inequalities in two variables.</li> <li>• Write linear inequalities in two variables.</li> <li>• Use linear inequalities to solve real-life problems.</li> </ul>			
<b>What is a linear inequality?</b>	<p><b>Definition:</b> An inequality uses the following symbols:</p> <p><math>&lt;</math> - <u>is less than</u>                      <math>&gt;</math> - <u>is greater than</u></p> <p><math>\leq</math> - <u>is less than or equal to</u>                      <math>\geq</math> - <u>is greater than or equal to</u></p>			
<b>What is a solution of a linear Inequality?</b>	<p><b>Definition:</b> <b>Practice:</b> Tell whether the ordered pair is a solution of the inequality.</p> <table style="width: 100%; border-collapse: collapse;"> <tr> <td style="width: 33%; vertical-align: top;"> <p>1. <math>x + y &gt; 5; (3, 2)</math></p> <p style="margin-left: 40px;"><math>x</math>   <math>y</math></p> <p style="margin-left: 40px;"><math>3 + 2 &gt; 5</math></p> <p style="margin-left: 40px;"><math>5 &gt; 5</math></p> <p style="margin-left: 40px;">NO</p> </td> <td style="width: 33%; vertical-align: top;"> <p>2. <math>x - y \geq 2; (5, 3)</math></p> <p style="margin-left: 40px;"><math>x</math>   <math>y</math></p> <p style="margin-left: 40px;"><math>5 - 3 \geq 2</math></p> <p style="margin-left: 40px;"><math>2 \geq 2</math></p> <p style="margin-left: 40px;">Yes</p> </td> <td style="width: 33%; vertical-align: top;"> <p>3. <math>-x - 2y \geq 5; (-2, -3)</math></p> <p style="margin-left: 40px;"><math>x</math>   <math>y</math></p> <p style="margin-left: 40px;"><math>-(-2) - 2(-3) \geq 5</math></p> <p style="margin-left: 40px;"><math>2 + 6 \geq 5</math></p> <p style="margin-left: 40px;"><math>8 \geq 5</math> Yes</p> </td> </tr> </table>	<p>1. <math>x + y &gt; 5; (3, 2)</math></p> <p style="margin-left: 40px;"><math>x</math>   <math>y</math></p> <p style="margin-left: 40px;"><math>3 + 2 &gt; 5</math></p> <p style="margin-left: 40px;"><math>5 &gt; 5</math></p> <p style="margin-left: 40px;">NO</p>	<p>2. <math>x - y \geq 2; (5, 3)</math></p> <p style="margin-left: 40px;"><math>x</math>   <math>y</math></p> <p style="margin-left: 40px;"><math>5 - 3 \geq 2</math></p> <p style="margin-left: 40px;"><math>2 \geq 2</math></p> <p style="margin-left: 40px;">Yes</p>	<p>3. <math>-x - 2y \geq 5; (-2, -3)</math></p> <p style="margin-left: 40px;"><math>x</math>   <math>y</math></p> <p style="margin-left: 40px;"><math>-(-2) - 2(-3) \geq 5</math></p> <p style="margin-left: 40px;"><math>2 + 6 \geq 5</math></p> <p style="margin-left: 40px;"><math>8 \geq 5</math> Yes</p>
<p>1. <math>x + y &gt; 5; (3, 2)</math></p> <p style="margin-left: 40px;"><math>x</math>   <math>y</math></p> <p style="margin-left: 40px;"><math>3 + 2 &gt; 5</math></p> <p style="margin-left: 40px;"><math>5 &gt; 5</math></p> <p style="margin-left: 40px;">NO</p>	<p>2. <math>x - y \geq 2; (5, 3)</math></p> <p style="margin-left: 40px;"><math>x</math>   <math>y</math></p> <p style="margin-left: 40px;"><math>5 - 3 \geq 2</math></p> <p style="margin-left: 40px;"><math>2 \geq 2</math></p> <p style="margin-left: 40px;">Yes</p>	<p>3. <math>-x - 2y \geq 5; (-2, -3)</math></p> <p style="margin-left: 40px;"><math>x</math>   <math>y</math></p> <p style="margin-left: 40px;"><math>-(-2) - 2(-3) \geq 5</math></p> <p style="margin-left: 40px;"><math>2 + 6 \geq 5</math></p> <p style="margin-left: 40px;"><math>8 \geq 5</math> Yes</p>		

**Graphing Linear Inequalities**

**Steps to Graph an Inequality:**

- Step 1:** Put the inequality in slope-intercept form.
- Step 2:** Graph the inequality using the slope and y-intercept.
- Step 3:** Graph the boundary line.
- Step 4:** Shade to represent all of the solutions.

Shading	Boundary Line	
	Dashed	Solid
Above	$>$	$\geq$
Below	$<$	$\leq$

**Practice:** Graph the *inequality* in a coordinate plane.

4.  $y < 4$

$m = 0$    Line: DASHED / SOLID

$b = 4$    Shade: ABOVE / BELOW

Can solutions be on the line? No

Is (0, 0) a solution? Yes

5.  $x \leq -1$

↓  
shade below/left  
solid line

Can solutions be on the line? Yes

Is (-1, 0) a solution? Yes

6.  $y < 3x + 1$

dash  
below

↙  $m = 3$   
↘  $b = 1$

Can solutions be on the line? No

Is (-1, 0) a solution? NO

5.6 Explain – Linear Inequalities in Two Variables - Notes

7.  $y \geq -x + 1$

$m = -1$  Line: DASHED/SOLID  
 $b = 1$  Shade: ABOVE/BELOW

8.  $-x + 2y > 2$   
 $2y > x + 2$   
 $y > \frac{1}{2}x + 1$   
 dash, above

9.  $x - y < 2$   
 $-y < -x + 2$   
 Flip  $\rightarrow$   $-1 = -1 = -1$   
 $y > x - 2$   
 dash, above

Writing an Inequality

10. Write an inequality that represents the graph.

$m = -\frac{2}{1} = -2$   
 $b = -1$

Line: Solid  
 Shading: below

Inequality:  
 $y \leq -2x - 1$

11. An ice cream truck can carry at most 75 gallons of ice cream. The table shows the inventory on the truck. Write an inequality that represents the numbers of gallons of strawberry and banana ice cream on the truck.

$20 + 15 + x + y + 18 \leq 75$   
 $x + y \leq 22$

Flavor	Quantity (gallons)
vanilla	20
chocolate	15
strawberry	$x$
banana	$y$
sherbet	18

Real-Life

12. An online store sells digital cameras and cell phones. The store makes a \$100 profit on the sale of each digital camera  $x$  and a \$50 profit on the sale of each cell phone  $y$ . The store wants to make a profit of at least \$300 from its sales of digital cameras and cell phones.

a. Write an inequality that represents how many digital cameras and cell phones they must sell.

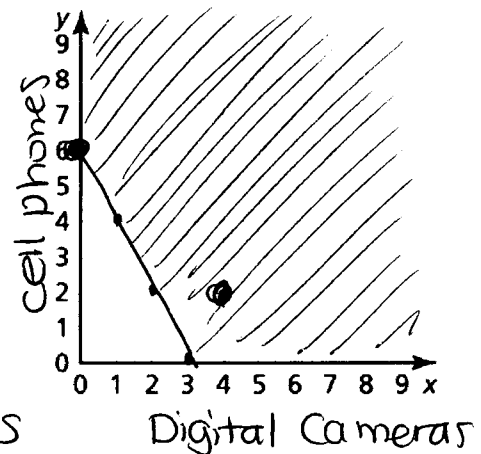

$100x + 50y \geq 300$

b. Graph the inequality.  $50y \geq -100x + 300$   
 $y \geq -2x + 6$

b. Identify and interpret two solutions of the inequality.

$(4, 2)$   
 4 digital cameras & 2 cell phones

$(0, 6)$   
 No cameras & 6 cell phones

# 5.6

## Linear Inequalities in Two Variables

In Exercises 1–4, tell whether the ordered pair is a solution of the inequality.

1.  $x - y > 2$ ; (5, 4)    2.  $x + y \leq -3$ ; (-1, -4)    3.  $5x + y \leq 12$ ; (2, 2)    4.  $x - 3y > 6$ ; (3, -1)

In Exercises 5–10, tell whether the ordered pair is a solution of the inequality whose graph is shown.

5. (1, 0)                                  6. (-1, -1)                                  7. (0, 0)  
 8. (-3, 1)                                  9. (2, -4)                                  10. (0, 3)

11. You have \$150 to spend on video games. The inequality  $7x + 32y \leq 150$  represents the number  $x$  of used video games and the number  $y$  of new video games that you can purchase. Can you purchase 10 used video games and 3 new video games? Explain.

In Exercises 12–16, graph the inequality in a coordinate plane.

12.  $y \geq 2$                                   13.  $x < -3$                                   15.  $y < 2x - 5$                                   16.  $-3x + y \leq 1$

17. Describe and correct the error in graphing  $y > 2x - 3$ .

In Exercises 18 and 19, write an inequality that represents the graph.

18.

Inequality:

19.

Inequality:

20. A department store offers a 10% discount on any purchase over \$200. The table shows the costs of items in a purchase at the store. Write an inequality that represents the costs of the shirt and shoes that will qualify the purchase for the discount.

Item	Cost
backpack	\$54.99
jeans	\$39.99
shirt	$x$
shoes	$y$
video game	\$49.95

21. You have at most \$20 to spend at an arcade. Arcade games cost \$0.75 each, and snacks cost \$2.25 each.

- Write an inequality that represents the numbers of games you can play and snacks you can buy.
- Graph the inequality.
- Identify and interpret two solutions of the inequality.

22. Write an inequality that describes all of the solutions to the inequality  $3x + 2y > 12$  when  $x = -2$ .

23. The measure of an acute angle is represented by  $(3x + 4)^\circ$ . Write an inequality that represents the possible solutions for the value of  $x$ .
